

Tomato Challenge — Leaderboard API

Provides the data for the intranet score banner: a ranked list of countries plus up to three rotating "badge" messages.

Endpoint

```
GET https://savethetomato.ikeafoundation.org/api/v1/leaderboard
```

Authentication

Send a Bearer token in the header:

```
Authorization: Bearer ikea-tomato-2026
```

Missing/wrong token returns `401 { "error": "Unauthorized" }`.

Response

```
{
  "leaderboard": [
    { "country_code": "DK", "score": 100, "tomatoes": 5, "per_employee": 1.2 },
    { "country_code": "PL", "score": 63, "tomatoes": 3, "per_employee": 0.9 }
  ],
  "badges": [
    { "type": "new_players", "country_code": "FR", "message": "10 new players in France!" },
    { "type": "encouragement", "country_code": "SE", "message": "Ketch-up Sweden!" },
    { "type": "participation", "country_code": "CN", "message": "China, every tomato counts!" }
  ],
  "updated_at": "2026-07-03T12:00:00Z"
}
```

Leaderboard

Always contains **all countries**, sorted best-to-worst by `score`.

- `country_code` — ISO 2-letter code, uppercase.
- `score` — blended 0–100 ranking score.
- `tomatoes` — total saved (whole number).
- `per_employee` — tomatoes per employee (decimal, may be `null`).

badges

Zero to three messages, **at most one of each type**. Render `message` as-is.

- `new_players` — a country just gained players.
- `encouragement` — nudge for a trailing country.

- `participation` — a country not yet on the board.

`country_code` is included if you want to show a flag alongside the message.

`updated_at`

ISO-8601 timestamp of the data.

Notes

- Response is **cached for ~1 minute**, so numbers/badges change about once a minute — safe to poll on that cadence.
- The **field/structure is stable**; exact scoring and badge wording may still be tuned. Don't hard-code specific messages.
- Data is currently **simulated** for development and will be reset before go-live.
